

RGS Radial rotating nozzles 75°/90°

The radial rotating nozzles **enz golden jet®** are equipped with 4 radial jets of 75°/90° for the pipe cleaning and 3 thrust jets for the advance which at the same time flush away the loosened residues. As a result, pipe ducts of all kinds, even with vertical borings etc., will be cleaned.

The moving part of the **enz golden jet®** nozzle rotates at a limited speed. These water jets hit the pipe wall directly with great impact, striking every corner, every dead end, every lateral pipe.

Applications

- Cleaning of drain pipes
- Cleaning of lateral pipes
- Removal of solid deposits

Working pressure up to 250 bar
