We build **customized jetting units** according to your specifications and needs.

## High pressure jetting units

We build customized jetting units according to your specifications and needs. All units are built at our factory in Kalmar, Sweden.

Flexible cassette mounted constructions allows installation in your choice of vehicle (van, trailer etc). High quality and sturdy construction in mainly stainless steel provide you with long service lifetime. The jetters can either be run by a separate engine or directly from the vehicles' PTO.

The units are supplied with motor guard, low water safety device and emergency stop function. The electrical installation is performed with extra high safety according to IEC 1346.

All our units are tested before delivery regarding pressure and flow. A protocol comes with each unit, verifying the design for high effectivity and low energy consumption.
